

Air Conditioning Contractors of America/American National Standards Institute

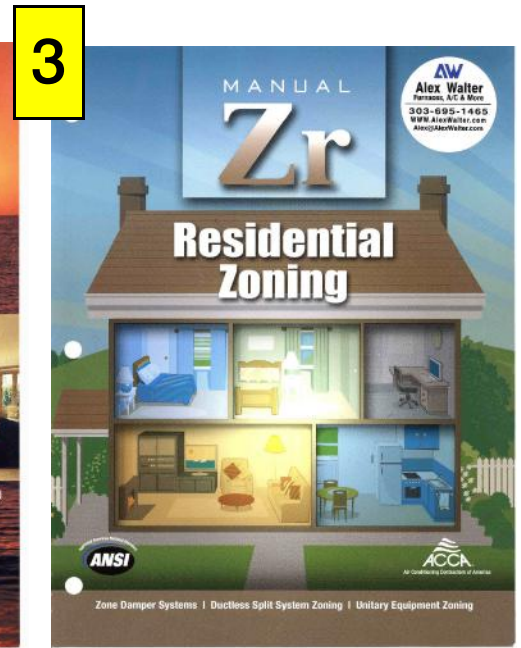

7 Steps for Proper Design & Installation of Residential Forced Air Heating & Air Conditioning Systems

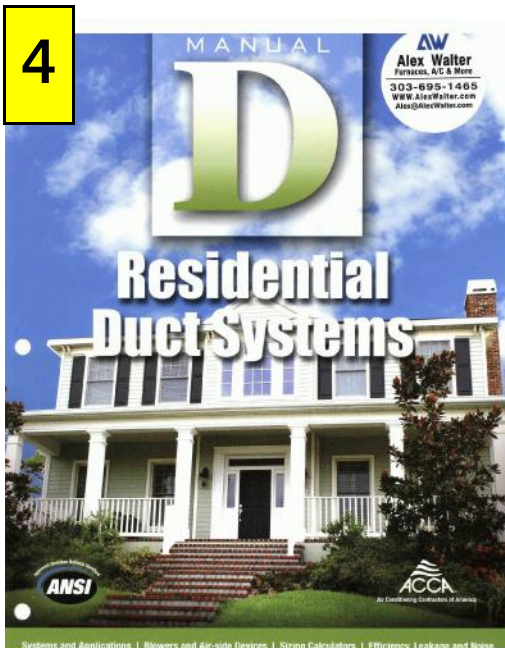

1
Develop an overall design concept

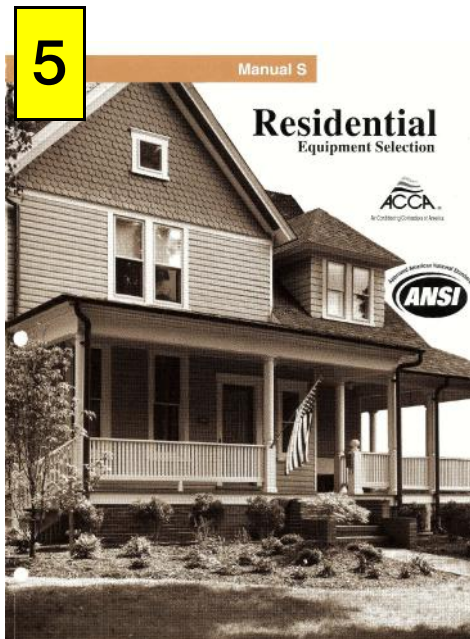

2
Determine how much heating and cooling is needed (The Load)

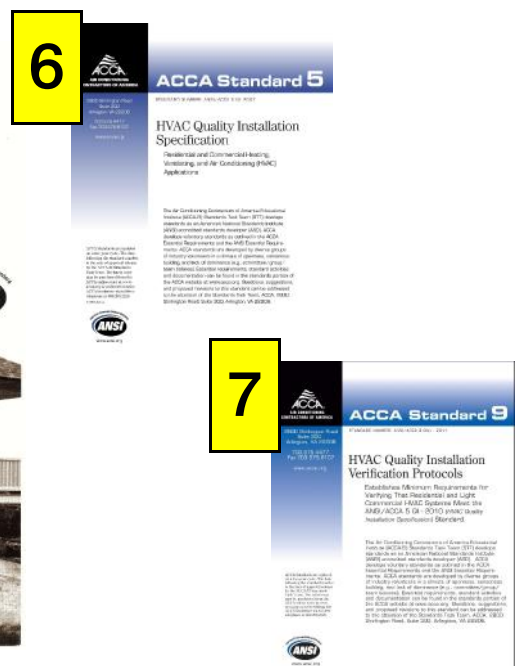

3
Design zoning (add thermostats) for large and/or multi-level floor plans

4
Design the duct system

5
Select heating & cooling equipment

6
Install the system according to these standards, ACCA (Installation) Standard 5 and ACCA (Verification) Standard 9
